(a) leftover vs allowed ratio shift
best CMB leftover (× 10⁻⁵ floor)
10²
10¹
10⁰
1× = CMB flat
10⁰
10¹
10²
allowed shift of the over : under patch ratio from the cosmic mean (%)
open circle: first shift that reaches 1×
inside, 0.5 Gpc domains, 50 Mpc patches (+0.83 / −0.39)
inside, 2 Gpc domains, 50 Mpc patches (+0.83 / −0.39)
inside, 0.5 Gpc domains, 50 Mpc patches (±0.3)
inside + outside, no mirror, 1 Gpc, 50 Mpc patches (+0.83 / −0.39)
(b) one domain at a time vs randomness
needed ratio shift per domain ÷ random scatter (σ)
10¹
10⁰
3σ
1σ
0.5
1
2
domain size (Gpc)
inside, mirror allowed; one domain only
30 Mpc patches (+2.1 / −0.55)
50 Mpc patches (+0.83 / −0.39)
100 Mpc patches (+0.24 / −0.25)
50 Mpc patches, typical ±0.3
ΛCDM scatter at domain size
