Centered ST+Gauss: expanding vs collapsing (same density, $\kappa \approx 0.23$)
Signed apparent Hubble
$H_{\rm obs}(\varphi)$
expand $H_{\rm bg} = +|H|$
collapse $H_{\rm bg} = -|H|$
Tidal piece identical; background sign flips
$(H_{\rm obs} - H_{\rm bg})/|H|$
expand
collapse (same tidal)
Distance-like A: shapes differ (expand vs collapse)
$A/A_{\rm mean}$ (smoothed)
expand $A \propto 1/H_{\rm obs}^2$
collapse $A \propto 1/H_{\rm obs}^2$
angle φ (deg)
Signed $H_{\rm obs}/|H|$ mean-renorm
mean-renorm series
expand $H_{\rm obs}/|H|$
collapse $H_{\rm obs}/|H|$
angle φ (deg)
