Migkas Fig.~6 vs expanding / collapsing model ($A \propto 1/H_{\rm obs}^2$)
$A/A_{\rm all}$
expand best phase $R^2 = 0.551$
collapse best phase $R^2 = 0.556$
Migkas A/A_{all}
B panel: same angular proxy (mass-only AN identical for expand/collapse)
$B/B_{\rm all}$
expand (same H proxy) $R^2 = 0.048$
collapse (same H proxy) $R^2 = 0.073$
Migkas B/B_{all}
Galactic longitude ℓ (deg)
