CMB dipole kill-shot sketch (linear / Alnes-scaled)
Toy $|\nabla \ln H|\, d$ (this profile)
Alnes-scaled $(d/15\,\mathrm{Mpc}) \times 1.4 \times 10^{-3}$
Observed CMB dipole $\sim 1.2 \times 10^{-3}$
Alnes/Kodama ~ 15 Mpc
$d = 0.5D \sim 1500$ Mpc
Linear estimate; O(1) geodesic corrections do not remove the ceiling class.
CMB temperature dipole amplitude $|\delta T/T|$
Observer offset from CoE, d [Mpc]
