(a) amplitude χ^2 profile
exact point mass, sector-corr.
exact point mass, naive
exact extended, sector-corr.
series, sector-corr.
series, naive
profile χ^2 (min over b_0, K, N [, D/L])
D/r
(b) curve-fit R^2 profile (transforms included)
exact point mass
exact extended
series
data Fourier fit ($m \le 3$)
profile R^2 (max over b_0, K, N [, D/L])
D/r
(c) extended density: where exact solutions exist
dotted: point-mass roots ($D/L \to \infty$)
no exact solution beyond them
exact 4x4 solutions, on-axis
exact 4x4 solutions, flipped
D/L of the exact solution
D/r
