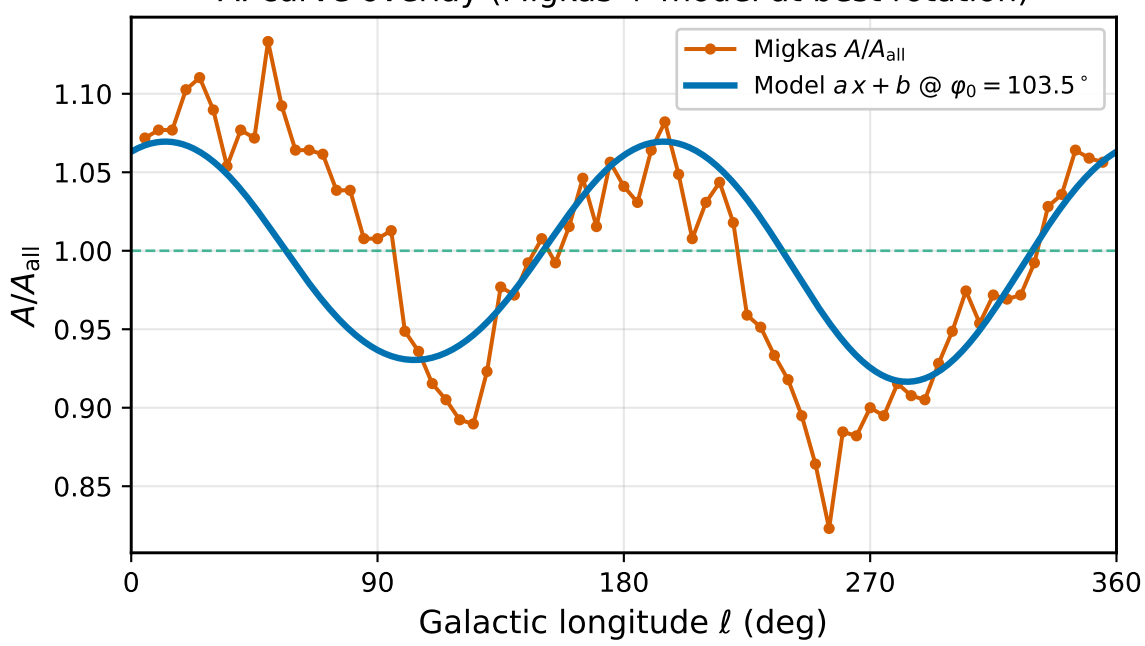
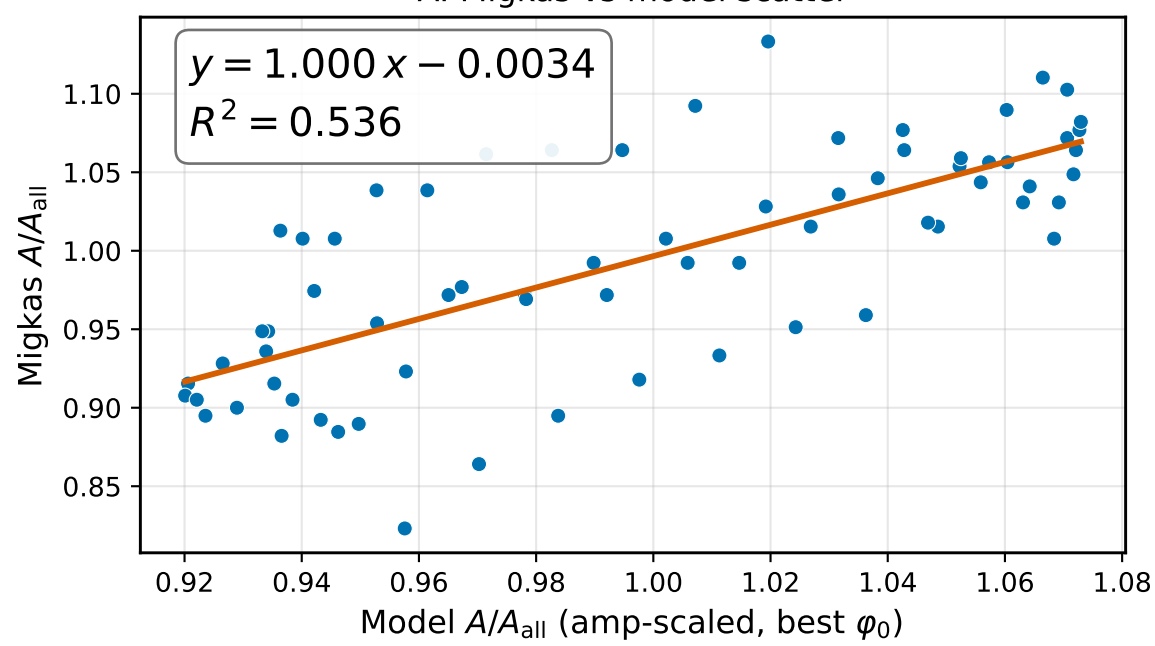
ST+Gauss $\kappa = 0.15$, $\alpha = 1$, $d/D = 0.1$ — rotation-optimised R^2 vs Migkas Fig.6
affine $y = ax + b$; model $A \propto 1/(1+f)^2$, $\Delta\ell = 90^\circ$ smooth; scatter x amp-scaled

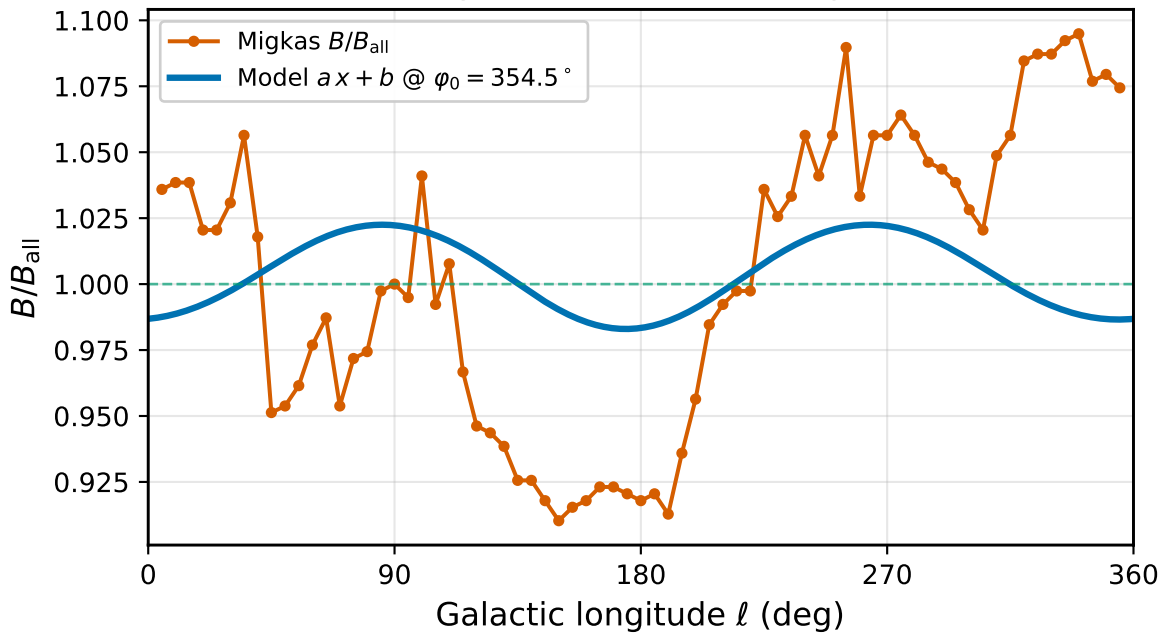
A: curve overlay (Migkas + model at best rotation)



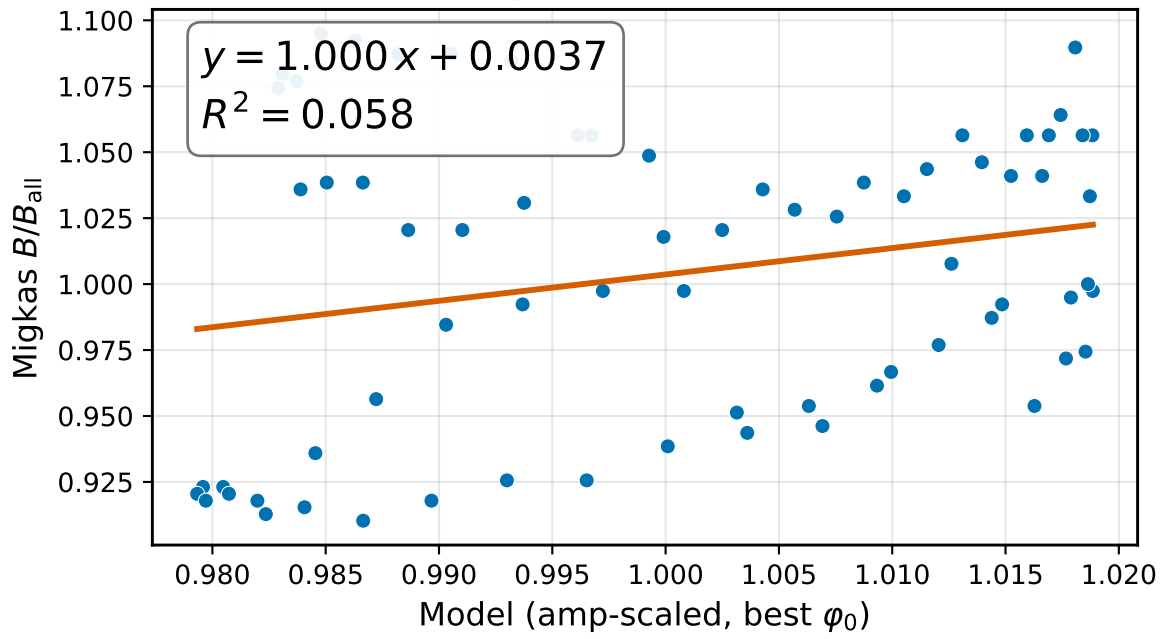
A: Migkas vs model scatter



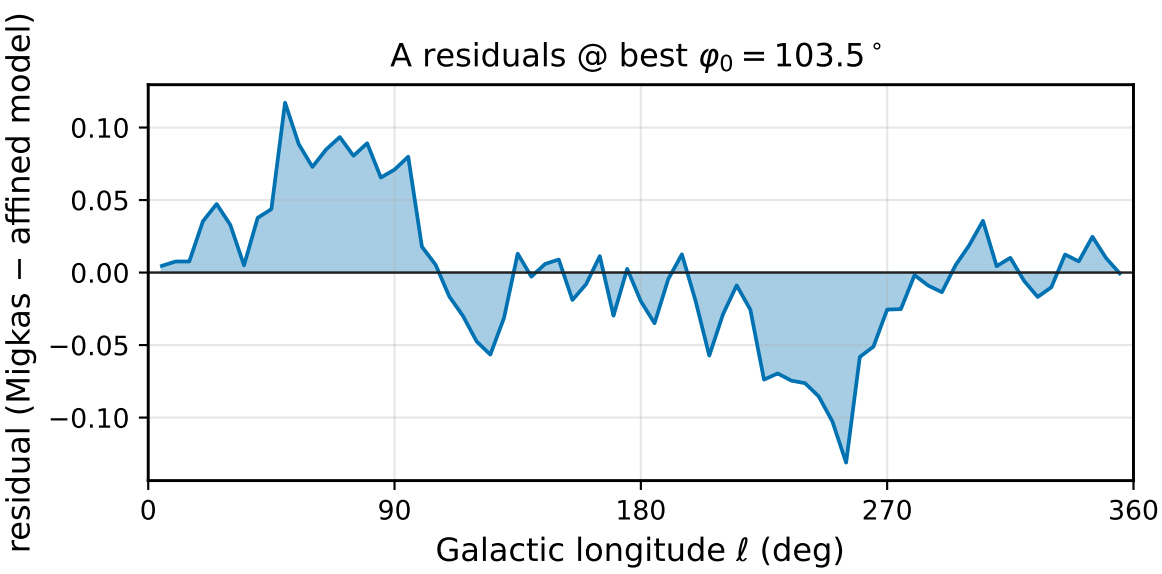
B: curve overlay (same ST+Gauss shape; null check)



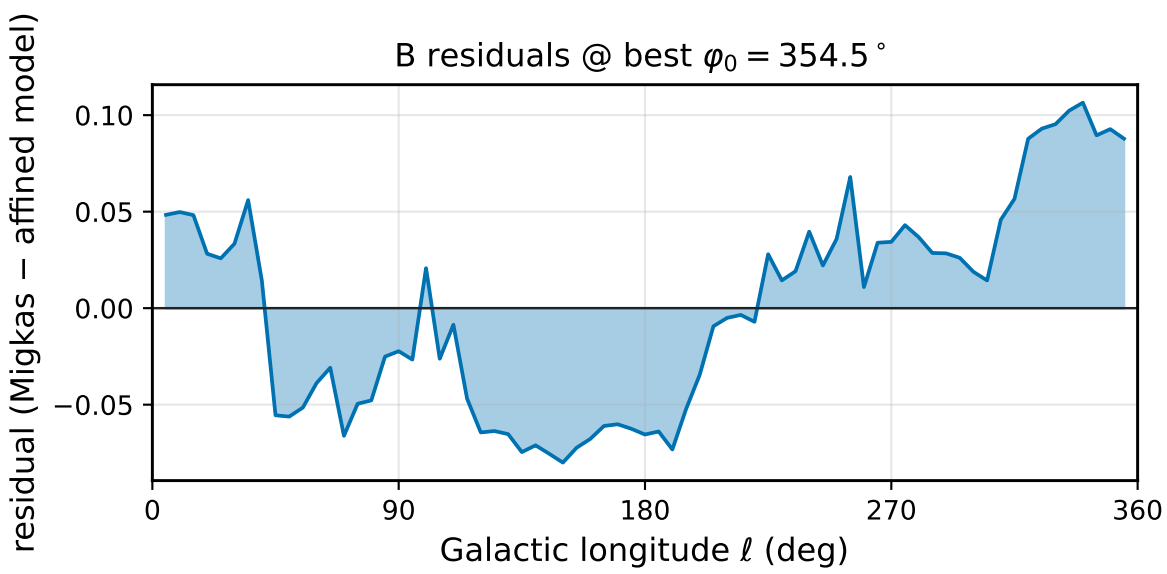
B: Migkas vs model scatter



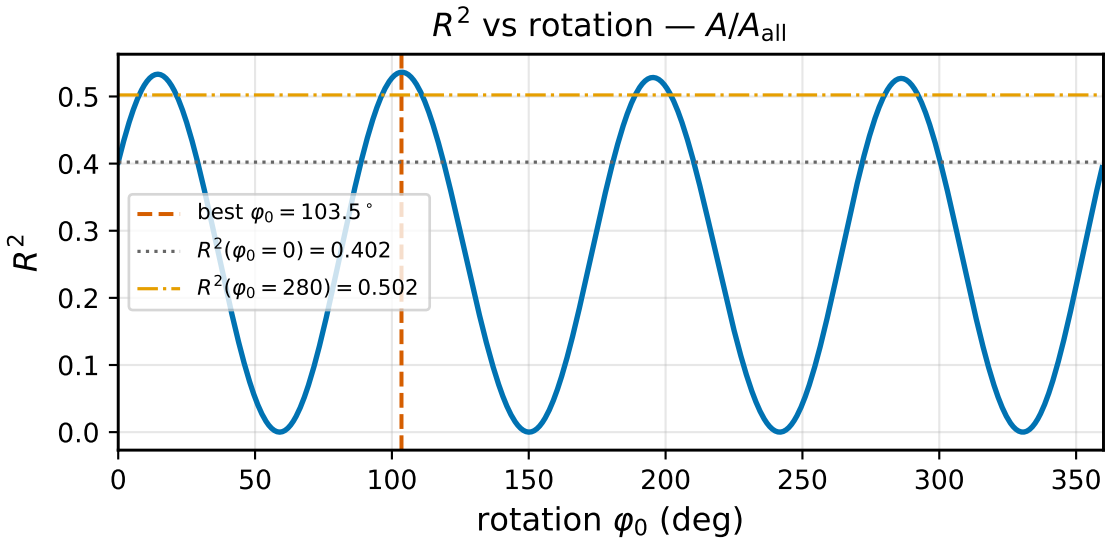
A residuals @ best $\varphi_0 = 103.5^\circ$

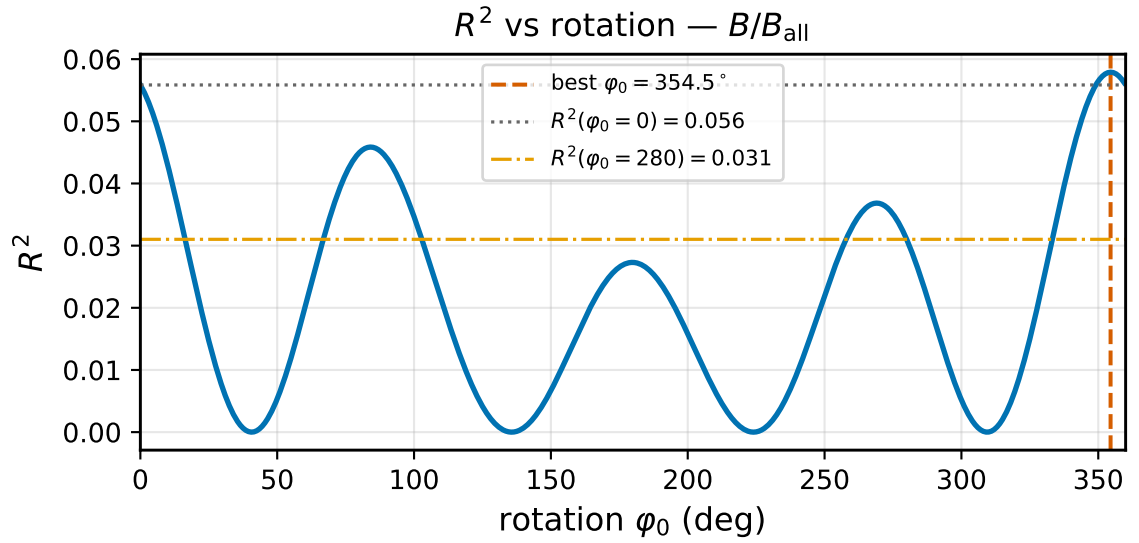


B residuals @ best $\varphi_0 = 354.5^\circ$



R^2 vs rotation — A/A_{all}





R^2 vs rotation — B/B_{all}
